PROFESSIONAL SUMMARY

AI Engineer and AI-driven product builder. Specialized in Large Language Model (LLM) orchestration (Claude, Claude Code, agents, custom skills, advanced prompt engineering), open-source image generation (Flux, ComfyUI, Nano Banana), and AI-augmented web development. Delivered 32+ websites to 12+ real clients, published a Chrome Web Store extension, built a desktop application for the oil industry, and shipped a 24/7 automated WhatsApp chatbot for real estate. My differentiator: I turn AI capabilities into finished products that deliver real value, in short timelines and with professional execution.

TECHNICAL SKILLS

Artificial Intelligence & Automation

- LLM Orchestration: Claude Code, Claude Agents, Custom Skills, Context Engineering (CLAUDE.md)
- Advanced Prompt Engineering, multi-agent workflow design
- Image Generation: ComfyUI, Flux, Nano Banana, inference pipeline design
- AI Automation: WhatsApp Business API, Twilio, integration of LLMs with external APIs
- Output evaluation and refinement of generative model results

Web & Application Development

- Frontend: JavaScript (ES6+), React 18, HTML5, CSS3, Tailwind CSS, Framer Motion, Vite
- Backend: Node.js, REST APIs, third-party API integrations (Steam Web API, Twilio)
- Databases: SQLite, browser storage (LocalStorage, IndexedDB)
- Desktop & Extensions: Electron, Chrome Extensions API
- Responsive design, performance optimization

Game Development

- Unity, C# (beginner-intermediate)

Tools & Methodology

- Git, GitHub, VS Code, Vercel, npm
- AI-augmented iterative development
- Technical documentation and context design for AI agents

PROFESSIONAL EXPERIENCE

AI Engineer & AI-Augmented Web Developer — Self-Employed Freelance

Jan 2025 – Present · Neuquen, Argentina (Remote)

- Designed and developed 32+ websites for 12+ real clients (dental clinics, entrepreneurs, service businesses) using an AI-augmented development workflow that reduced delivery times by approximately 60–70% compared to traditional flows.
- Built custom prompt pipelines and workflows with Claude Code to automate component generation, refactors, and technical documentation, reusable across 10+ projects.
- Owned the full project lifecycle: client requirements, UI/UX design, development, deployment on Vercel/Netlify, and maintenance, with a 100% on-time delivery rate.
- Generated visual assets with ComfyUI, Flux, and Nano Banana for landing pages and client campaigns requiring custom imagery, eliminating reliance on generic stock libraries.
- Direct communication with clients in Spanish and English on technical and product requirements.

Field Operations Assistant — Schlumberger

Mar 2018 – Aug 2019 · Neuquen, Argentina

- Supported field operations in drilling projects under the operational standards of a leading multinational oilfield services company.
- Coordinated with geology and operations teams, developing professional communication skills in demanding corporate environments.
- Managed logistics and transportation of high-value technical equipment (drill bits, geological tools) following industrial safety protocols.

SELECTED PROJECTS

Real Estate Chatbot — AI Automation

Stack: Node.js, Twilio, WhatsApp Business API, LLM integration

Automated WhatsApp chatbot for real estate agencies with 24/7 coverage. Handles property inquiries, filters leads, and schedules visits with no human intervention, eliminating 100% of manual first-response work. Implements conversation logic and AI-orchestrated responses.

Personal Portfolio — AI-Native Web Application

Stack: React 18, Vite, Tailwind CSS, Framer Motion · Built with Claude Code

Single-page portfolio featuring a custom "Signal/Noise" theme, advanced animations, support for 4 languages (ES/EN/PT/FR), and fully responsive layout (mobile + desktop). Built end-to-end through an AI-augmented workflow with custom context engineering via CLAUDE.md and specialized agents.

URL: lautarovelo.vercel.app

TabFlow — Chrome / Brave Extension

Stack: Chrome Extensions API, JavaScript, HTML, CSS

Browser extension published on the Chrome Web Store that allows users to save, name, and restore tab groups persistently across sessions. Local storage through the Chrome API and one-click session restoration.

Repository: github.com/Bleskz/tabflow

CoreTracker — Windows Desktop Application

Stack: Electron, React, SQLite, Node.js

Offline desktop application for oil industry use cases, focused on registering, searching, and managing well samples (cuttings, cores, channels). Includes a sample loan system, Excel and PDF export, and a local SQLite database. Runs 100% offline.

Repository: github.com/Bleskz/coretracker

Steam Analyzer — Web Application

Stack: React, Steam Web API, Tailwind CSS, Node.js

Web app that performs in-depth analysis of public Steam profiles: total playtime, estimated game spend, inventory market value, and full library statistics.

Demo: steam-analyzer-rust.vercel.app · Repository: github.com/Bleskz/steam-analyzer

Additional projects available in the portfolio: extensions, Unity games, walking simulators, and client work.

WORK METHODOLOGY

My development workflow systematically combines human and AI capabilities. I design custom contexts (CLAUDE.md, custom skills, agents) per project, steer the models toward product goals, and review the output with technical judgment before integration. This methodology enables me to ship complete products in significantly shorter timeframes than traditional flows, while maintaining quality and consistency.

I apply the same approach to image generation: I build ComfyUI workflows with models such as Flux and Nano Banana to produce custom assets (landing pages, branding, visual content) without relying on generic stock libraries.

My focus is on the result delivered to the client or end user, not on the tool used to get there.

EDUCATION

High School Diploma

Neuquen, Argentina

Self-Directed Continuous Learning

Applied Artificial Intelligence, prompt engineering, LLM agent orchestration, image generation models, fullstack web development, React application architecture, API integrations, browser extension development, and Electron desktop applications. Active learning through official documentation, hands-on experimentation, and shipping real products.

LANGUAGES

- **Spanish:** Native
- **English:** Bilingual (C2 equivalent, self-assessed) — professional written and spoken communication

ADDITIONAL INFORMATION

- Availability: Full-time, immediate start
- Work modality: Remote, hybrid, or on-site
- Relocation: Open to discussion
